Explaining the Strange MYSTERY

Dr. Morris Fishbein

of WOMEN becoming MEN By Dr. Morris Fishbein

HEN authorities at the Olympie Games began demanding physical examinations of winners in women's events in order to determine that they were actually female and not male, they were not setting a precedent. The very word we use for describing an individual of doubtful sex or of both sexes—hermaphrodities.

hermaphrodite

comes to us from the ancies Greek

room the ancient Greeks. Both Original Wingle Fe Fe T to such strangely formed human beings and most of the other. Greek and Roman writers, mention them. In fact, the inhabitants of ancient Athens used to throw all such babies into the sea because they were considered to be signs of bad luck. Down through the Middle Ages Jone medical writer after another-tells of the oscurrence of such unfortunate human beings and describes the strange lives which they lived.

Among the earliest cases, reported in the records of our own country is that of Kattherine or Charles. When born in 1824 she was considered a girl until the age of 40. In fact, the lived as a woman with a man until the age of 46. She had all the characteristics of a handoome woman. Then at 46 her characters and her.

Then at 46 her character and her-appearance changed so that at that age she—now he—married a woman and lived as a man until the time of her or his death.

her or his death.

The cases in the early literature repeat themselves with remarkable monotony- and there are hundreds of them in the medical records. In practically all of them the organs of ease are deuplicated—if not wholly, at least partially—so that the sex activities are not subject to much interference from either the male or the

These happy newly-weds are Mark Weston of England and his wife, the former Alberta Bray. And the athletic young woman at the left is Mark Weston who was Mary Edith Louise Weston, a champion woman athlete, until an operation, recently, changed operation recently changed "her" to a man.

Now they made an opening on the right side of his body and here they found the tissues of sex belonging to the male. Since this per-son had always lived as a male, it was de-

as a male, it was de-cided by the doctors to save the tissue on the right side of the body and to remove those on, the left to as to determine the shapeter of this individual definitely toward the masculine side. The surgeons and investigators who studied this patient record him, or "it," as the first human case of true double sex ever recorded,

THERE are, however, many cases in which

THEIRE are, nowever, many cases in which the degrees or proportions of each sex concerned in a single individual vary.

A college student, aged 19, had been looked on in early life as a fairly normal girl, yet when the reached the age of 13 the changes that usually develop in girls did not appear, and as she grew older she became more and more convinced that he was different from other sith.

and as she grew older she became more and more convinced that she was different from other girls.

As a child she had played with dolls and all her playmates had been girls. Moreover, like other little girls she had developed her preferences among the boys and when playing with girls had talked about the time when she would marry and have babies. Yet when she reached 19 years of age she had failed to develop as women develop, had thin hips and a moderately heavy growth of hair on her upper lip; her chest was flat and undeveloped.

An operation was done and in the abdomen there was a complete absence of the female organs of childbirth. Instead there were found the male organs of sex, hidden away in the abdominal cavity. Here was a problem for the physicians!

It became necessary after examination of the external organs to give this girl an opportunity

Every once in a while we hear, as we have heard just recently, that some person's sex has changed from female to male. In this informative article Dr. Fishbein discusses the how and why of these peculiar cases

to live the rest of her life as a woman. The male sex glands were removed. The necessary surgery was done necessary surgery was done to give her all the external appearances of a woman, and appearances of a woman, and then the psychologists went to work to reassure her of the possibilities that she might live her life as a normal woman. After all, her instincts had always been feminine.

Ten years later this girl reports that every normal de-

Inne.

Ten years later this girl reports that every normal desire of a woman is doubly strong in her row and only the fact that she can sever have children of her own gives her a poignant and great disappointment.

really crazy or becomes "sports minded" and all of the nations of the world vie for the dubious national honor of first place in the Olympic Games. The little European nations are particularly earnest about these affairs. ""A m o n g all the affairs. Among all the girls Zdenka Koubkova was outstanding for her athletic prowess. She could run and jump like a man.

THEN it was decided that shey was really a man, so an operation was performed like some of those that I already have described and now Zdenka Koubkova is able to talk, walk and shave like any other masculine being.

The most difficult cases for the doctors and the psychologists are those in which the person resembles a male

chologists are those in which the person resembles a male physically and a female in all of his or her mental character-sistics or vice versa. These are cases of pseudoher-maphrodites and there are thousands of records of such occurrences. Occasionally the tissues physically reemble those of both sexes.

cocurrences. Occasionally the tissues physically reemble those of both exces.

In recent years investigas tors in the laboratories of biology have been studying the question as to whether or not complete eax transformation in animals is possible. The year of the property of the propert

that maleness is related to a high-metabolic rate and femaleness to a low metabolic rate. The constitution of every individual is apparently determined by the quality of male and female factors that he gets from each of his.

AS Prof. F. A. E. Crew has pointed out, there are two opposing views concerning the starting cases in which it is reported that some gift has become a boy and that skins have been exchanged for trousers.

Crew believes that such individuals have mever been gifts.—He conceives of these individuals as males in whom the necessary stimulus from the glands for the proper differentiation of the male sex equipment has been delayed. As a result, the hody grows without chiferentation and the degree of the abnormality is determined by the degree of delay in the coming of the stimulation from the pituitary glands or the sex glands are found.—In such cases the female determining reactions in the later angare. We know today that the plands of the body determined reactions which were in excess at the beginning of differentiation were overwhelmed by the male determining reactions in the later angare. We know today that the glands of the body determined these characteristics and the manner of action of the glands even to a superior of the sex control of the glands of the body determined these characteristics and the manner of action of the glands even to vary in every human being.

The operations that are performed on these nations are not as a such as the performed on the nations are not as a such as the performed on the nations are not as a such as the performed on the nations are not as a such as the performed on the nations are not as a such as the performed on the nations are not as a such as

A fine-looking couple? Not at all—just two views of Zdenek Koubek, of Bohemia, who used to be a noted girl athlete named Zdenka Koubkova. This picture was made by laying a photograph of Koubek as.he looks today over a photo showing him—or her—in the guise of a short time ago.

Inez Mitrani and Nesim Mitrani look so much alike they can't be told apart—which is only natural, because they're the same person lnez, a girl of 18, became Nesim, a normal boy, after an operation performed in Istanbul.

boy, arter an operation performed in female point of view.

There are, of course, many cases in which the condition is not actual but spurious. In such cases the organs of sex are deformed so as to give the appearance of the male to one distinctly womanish in character. These are not considered as actual cases of the type of double sex.

Because medicine of an earlier day understood these conditions so pooily, the reports, even by doctors, are full of doubt and misunderstanding, but in recent years there has come a better knowledge of the significance of such information and the records bring to light some astounding cases.

SOME 10 years ago a 25-year-old woman walked into a clinic in Germany. She told the dectors that as a child she had always played with boys and had never cared to play with girls. Her favoric sports were the games 50 battless and of robbers and detectives—jest the games that little boys all over the world

the games that little boys all over the word like to play.

When she was 11 hb fell in love with a little girl, and when she was 15 she acted as a male lover might act toward another little girl. Yet, when she was 22 years old, in re-sponse to the whishes of her parents, she married a young man who tried to divorce her three

her feminine character, all her feelings were distinctly masculine so that she separated from her husband and began wearing men's clothes.

C) 298

Then at 25 years of age, in search of some relief from herstrange condition, she sought the medical clinic and here for the first time it was found that her female organs of sex actually concealed masculine tissues. Four operations were required at intervals during a period of two years whereby the female exogans were transformed to resemble those of the male and from that time on the unhappy individual has lived as a man. In Ballimore some years ago

months later. Nothwithstanding

from that time on the unhappy individual has lived as a man.

In Baltimore some years ago appeared a bay 18 years old—at least he had always lived as a boy. In fact, all his life he had played with little boys. He had gone out with pains in his abdomen which he described as "leaning down" pains and when. He was examined, it was discovered that his organs of sex, while definedly masculine, were rather incompletely developed.

Because of his unhappines over

incompletely developed.

Because of his unhappiness over this condition, the doctors at Johns Hopkins Hospital decided to do an operation to discover the difficulties. Then the y found within his abdominal cavity not the organs of a man but those of a woman—in fact, all of the tissues, necessary to permit him to function as a woman in child-birth. At least that was the condition on his left side.

This made a problem for the

This made a problem for the doctors. Here was a normal-looking young man with masculine instincts and with all of the normal female organs on the left side of his body. Was he male

or female?
The doctors decided to search

Another of the strange sex-transformation cases is reported from China, where the sex of Yao Ching-ping was changed from female. These pictures show Yae as a girl and as a boy.

per—in the guise of a short time ago.

mine which type of sex gland predominates;
then a removal of the persistent sex gland of
the opposite type, and plastic surgery on the
external organs of sex to as to resemble as
nearly as possible the kind of organs of sex that
are to predominate finally in the person concerned.

No doubt in various places in the United
States today there are little girls growing up
who will eventually turn out to be predominantly
made and who will need the type of diagnosis and surgery that has been mentioned.

What they need most at this time is proper
understanding by their parents, by their decross and by the community in general. If the
parents have the slightest doubt that the budy's
sex is not fully determined as it should be, they
should give themselves and the child the benefit of early scientific diagnosis at the first possable moment.
